Section 10: Refined and Detailed Use Case Diagram

Project: Clinical Management System (CMS) — ABC Clinic

Description:

This refined and detailed use case diagram builds upon the initial textual analysis to incorporate complete actor generalization hierarchies (such as Patient and Staff subtypes), primary system actors (Patients, Receptionists, Nurses, Physicians, Clinic Manager, Ministry of Health, Accounting Firm, and External Medical Partners), and advanced system relationships—including `<<include>>` and `<<extended>>` dependencies—derived from the clinic's core workflows.
